

“We certainly recommend people look at River Region as a first choice.”

In May 2006, Donald Robey unexpectedly experienced just how exceptional the level of care is at The Heart Center at River Region when he was taken to the River Region Emergency Room with difficulty breathing. A series of blood work and tests found he had a 95% blockage in a carotid artery. Mr. Robey underwent a carotid endarterectomy to remove the blockage. After one day of recovery in a patient suite, he was released. He recounts, “I chose Dr. Crocker and Dr. Bahro because of their excellent success rate and recommendations from a number of their cardiac/surgical patients. We are lucky to have Dr. Crocker and Dr. Bahro here.”

Following his release from the hospital, Mr. Robey began rehabilitation at the Cardio Pulmonary Rehab Center at River Region. Mr. Robey was extremely pleased with his rehab and states that, “The Cardiopulmonary Rehabilitation facility at River Region is excellent. This has definitely increased my overall strength and stamina.” As a retired Division Chief from ERDC – WES, Mr. Robey is back doing the things he loves to do, including vacationing with his family, and playing golf.

“The care I received in that CCU, I’ve never received care like that before. We’ve been in hospitals elsewhere in the country, and that is the best nursing I have ever seen. They are top notch,” said Mr. Robey. “I’d recommend them to anyone.” For more information about The Heart Center at River Region, call 601-883-5000 or visit the website at www.riverregion.com.

River Region is the first hospital in Mississippi to become an accredited Chest Pain Center.

Expert care a heartbeat from home.
